Real Time College

LINKED LIST

1. Write a program "Employee Management"
   Implement this using Linked List.
   The structure of the program:
   - Employee name
   - E-ID
   - Employee status (Enum) single\married\divorced
   - Employee department (Enum) development\marketing
   - Age
   - Salary
   - How long have been working in the company

   Program Menu functionality :

   - Adding new employee
   - Removing employee by id
   - Removing all employee by department
   - Find employee by id
   - Show all employees
   - Find employees by department
   - Find employee by years in the company
   - Sorting the employee by name
   - Sorting employee by id

   Describe why this way is better than the other (without linked list)
